# SOLUTIONS AT A GLANCE

## HauteMOBiLE™

Connect any vehicle over cellular, 802.11a/b/g/n or 4.9GHz and stay always connected. The HauteMOBiLE wireless router supports secure VPN mesh tunneling which automatically switches between networks. High speed, high security, high reliability and ease of use!

## HauteWRAP™

For 10 years the HauteWRAP wireless router has been the standard for extending private high speed broadband networks to remote locations. Designed for video and data and operating on almost any band, the HauteWRAP is the powerful but cost effective workhorse of wireless.

## HiveCAM®

Easy to install and highly capable, the HiveCAM combines a high performance IP camera, a wireless router, and a VMS server with storage into one integrated package. HiveCAMs mesh together and share resources. By installing HiveCAMs you extend your wireless coverage, add video storage, and reduce complexity.

## HauteMESH™

The HauteMESH is the ultimate broadband wireless device, delivering high speed communications when other solutions fail. It combines multiple broadband radios, cellular modems, mesh routing, and secure VPN tunneling into a completely automated package. The intelligent HauteMESH switches networks automatically, while providing always on 802.11a/b/g/n local connectivity to your remote devices.

## ECM™

Evidence Case Manager (ECM) is a complete evidence workflow system for video, audio, and sensor data collected from devices such as HauteVIEW body worn cameras, HiveCAM intelligent mesh cameras, HiveMINDER VMS servers, microNVR based digital in-car video systems as well as from third party VMS systems, IP cameras, and even RMS, and CAD systems. ECM captures, processes, and stores your data using CJIS compliant security and chain of custody. ECM works with many different storage solutions, including cloud. And ECM provides an intuitive way to search, export and redact all of your data assets.

## HauteVIEW™

HauteVIEW body worn devices are more than just cameras, combining advanced sensor and geo-location technology with leading edge video processing. The HauteVIEW body worn device is designed for use with the entire HauteSpot ecosystem, including HauteVIEW docking stations, Evidence Case Manager workflow and storage systems, and cloud services. Don't buy just a camera, buy a solution.

## HiveMINDER™

HiveMINDER, is a fully distributed mesh VMS system, which runs on the HiveCAM® and microNVR servers. It is a simple to use, powerful VMS that scales right along with your network from one to thousands of cameras. With HiveMINDER every camera can become a server which can process and store it's own video. And every HiveMINDER can look like a camera to upstream VMS systems, allowing you to keep your investment in existing systems while adding advanced capabilities.

## microNVR®

Perfectly balancing performance, size, power, and functionality, the microNVR is the ideal solution for edge video processing. Use it in covert applications, on poles, in vehicles, or at remote office locations as a VMS server, wireless router, and VPN gateway. Designed for use with the HiveMINDER mesh VMS system, but can be used with any VMS software running on MS Windows or Linux.

## We've Got You Covered!

## HAUTESPOT

HauteSpot has years of experience and knowledge with wireless IT video and data networks. Our mission is to provide a cost effective, scalable, comprehensive network and storage ecosystem to our customers. From video capture and storage to content management and chain of custody to complete system integration, we've got you covered. To learn more about how HauteSpot can help you, please send us an email or call us.
